EXPERIENCE

Software Engineer Intern Jun 2026 — present
Google *Warsaw*

- Building evaluation pipelines for AI agents.

Software Engineer Intern Jun 2025 — Sep 2025
Snowflake *Warsaw*

- Early engineer on the Snowflake Universal Driver (now open source). Error handling patterns I designed as an intern are still in production a year later.

Software Developer Jun 2024 — Jun 2025
Atinea *Warsaw*

- Developed a custom SQL query parser and preprocessor.
- Applied graph algorithms to reduce time complexity, accelerating worst-case workloads from 1h → 1s on stress tests.

Problem Setter Jun 2022 — Jun 2025
Instalogik *Warsaw*

- Designed problems for three editions of Instalogik, one of Poland's largest math/programming competitions, contributing to 3× participation growth (6,400 → 18,100).

EDUCATION

University of Warsaw — Faculty of Mathematics, Informatics and Mechanics *Warsaw*
BSc in Computer Science Oct 2023 — Jul 2026

- Final grade: **4.61/5.00**
- Advanced coursework in algorithms, distributed systems, and automata theory.
- Thesis: *FormalInception-ATP: Agentic System for Automated Theorem Proving in Lean 4* — we built an agentic harness for proving math theorems that achieved a **100% success rate** on the *miniF2F* benchmark with inexpensive models. As far as we know, we were the first to saturate this benchmark.

ACHIEVEMENTS

Finalist of Polish Olympiad in Informatics Feb 2023

- Ranked in the **top 100** out of over 1,000 participants from the best Polish high schools.
- Solved over **500 complex problems** during live contests and training.

PROJECTS

- Formalizer**: an experimental agentic harness designed for autoformalizing math theorems and proofs in **Lean** while preserving the original proof's structure.
- NeuroBlasters**: a 2D multiplayer shooter game built in pure **Rust** with an async server and a simple physics engine.
- Distributed Shortest Paths**: a service for efficiently computing shortest paths in large, distributed graphs. All serving and preprocessing were deployed to GCP (Kubernetes, GCS, Dataflow, **Python**).
- Raft**: fully functional implementation of the Raft consensus algorithm in Rust.

SKILLS

- Programming Languages**: Rust, C++, Python, Java, C, SQL, Bash, Lean
- Tools and Technologies**: Linux, Git, GCP, Kubernetes, databases, LaTeX, AI coding tools (Codex, Claude Code, Cursor)

LEADERSHIP / ACTIVITIES

Assistant Unit Leader — Bytów Mar 2021 — Jun 2025

- Co-organized multiple large-scale events, including 3 summer camps for over 100 participants; led and coordinated groups of 20+ members.
